# What FCA Can Do for Artificial Intelligence?

## FCA4AI: An International Workshop

### Preface

This is the second edition of the FCA4AI workshop, the first edition being associated to the ECAI 2012 Conference, held in Montpellier, in August 2012 (see <http://www.fca4ai.hse.ru/>). In particular, the first edition of the workshop showed that there are many AI researchers interested in FCA. Based on that, the three co-editors decided to organize a second edition of the FCA4AI workshop at the IJCAI 2013 Conference in Beijing.

Formal Concept Analysis (FCA) is a mathematically well-founded theory aimed at data analysis and classification. FCA allows one to build a concept lattice and a system of dependencies (implications) which can be used for many AI needs, e.g. knowledge processing involving learning, knowledge discovery, knowledge representation and reasoning, ontology engineering, as well as information retrieval and text processing. Thus, there exist many “natural links” between FCA and AI.

Recent years have been witnessing increased scientific activity around FCA, in particular a strand of work emerged that is aimed at extending the possibilities of FCA w.r.t. knowledge processing, such as work on pattern structures and relational context analysis. These extensions are aimed at allowing FCA to deal with more complex than just binary data, both from the data analysis and knowledge discovery points of view and from the knowledge representation point of view, including, e.g., ontology engineering.

All these works extend the capabilities of FCA and offer new possibilities for AI activities in the framework of FCA. Accordingly, in this workshop, we are interested in two main issues:

- How can FCA support AI activities such as knowledge processing (knowledge discovery, knowledge representation and reasoning), learning (clustering, pattern and data mining), natural language processing, information retrieval.
- How can FCA be extended in order to help AI researchers to solve new and complex problems in their domains.

The workshop is dedicated to discuss such issues. The papers submitted to the workshop were carefully peer-reviewed by two members of the program committee and 11 papers with the highest scores were selected. We thank all the PC members for their reviews and all the authors for their contributions. We also thank the organizing committee of ECAI-2012 and especially workshop chairs Jérôme Lang and Michèle Sebag for the support of the workshop.

The Workshop Chairs

Sergei O. Kuznetsov

National Research University Higher Schools of Economics, Moscow, Russia

Amedeo Napoli

LORIA (CNRS – INRIA – Université de Lorraine), Vandoeuvre les Nancy, France

Sebastian Rudolph

Technische Universität Dresden, Germany

## Program Committee

Mathieu D'Aquin (Open University, UK)

Franz Baader (Technische Universität Dresden, Germany)

Karell Bertet (Université de La Rochelle, France, Germany)

Claudio Carpineto (Fondazione Ugo Bordoni, Roma, Italy)

Felix Distel (Technische Universität Dresden, Germany)

Peter Eklund (University of Wollongong, Australia)

Sébastien Ferré (IRISA Rennes, France)

Pascal Hitzler (Wright State University, Dayton, Ohio, USA)

Dmitry I. Ignatov (NRU Higher School of Economics, Moscow, Russia)

Mehdi Kaytoue (INSA - LIRIS Lyon, France)

Markus Krötzsch (University of Oxford, UK)

Sergei A. Obiedkov (NRU Higher School of Economics, Moscow, Russia)

Uta Priss (Ostfalia University of Applied Sciences, Wolfenbüttel, Germany)

Baris Sertkaya (SAP Dresden, Germany)

Henry Soldano (Université de Paris-Nord, France)

## Table of Contents

2	<i>FCA and pattern structures for mining care trajectories</i> Aleksy Buzmakov, Elias Egho, Nicolas Jay, Sergei O. Kuznetsov, Amedeo Napoli and Chedy Raïssi . . . . .	7
3	<i>Using pattern structures to support information retrieval with Formal Concept Analysis</i> V́ctor Codocedo, Ioanna Lykourantzou, Hernan Astudillo and Amedeo Napoli	15
4	<i>FCA-Based Concept Detection in a RosettaNet PIP Ontology</i> Jamel Eddine Jridi and Guy Lapalme . . . . .	25
5	<i>Bases via Minimal Generator</i> Pablo Cordero, Manuel Enciso, Angel Mora Bonilla and Manuel Ojeda-Aciego	33
6	<i>Debugging Program Code Using Implicative Dependencies</i> Artem Revenko . . . . .	37
7	<i>Practical Computing with Pattern Structures in FCART Environment</i> Aleksy Buzmakov and Alexey Neznanov . . . . .	49
8	<i>Towards Knowledge Structuring of Sensor Data Based on FCA and Ontology</i> Peng Wang, Wenhuan Lu, Zhaopeng Meng, Jianguo Wei and Françoise Fogelman-Soulié . . . . .	57
