Kris:
KRIS [2] is a complete description logic knowledge representation system, including both a Tbox and an Abox. The logic implemented in KRIS is $\mathcal{ALCNF}$, that is $\mathcal{ALC}$ with number restrictions, features and feature-chain agreement; an extension to include reasoning with concrete domains is also available. KRIS uses a sound and complete tableaux algorithm, with a number of optimisations to improve performance [1]. Programming language: Common Lisp (compiled).

Availability:
Further information about KRIS can be obtained from H.-J. Burckert:

hjb@dfki.uni-sb.de

Advantages:
KRIS performs sound and complete reasoning with respect to a relatively expressive concept description language. It is a well established system and should therefore be relatively stable.

Hardware and Software:
PC clone; 200MHz Pentium II CPU; 64MB RAM; Linux; Allegro CL 4.3.

Results:
Note that although KRIS's reasoning is sound and complete, the classifier behaves strangely when the KB contains synonyms (multiple concepts with equivalent definitions). This results in several errors in the KB classification tests.
