CONTENTS
Image Processing and Earth Remote Sensing

1. Superpixel-Based filtering for image noise reduction
Anna Egorova 1-4

2. Assessment of camera orientation in Manhattan scenes using information from optical and inertial sensors
Evgeny Myasnikov 5-9

3. Iris segmentation in an image using U-Net convolutional neural network architecture
Yulia Ganeeva, Evgeny Myasnikov 10-13

4. Adaptation of parameterized interpolation algorithms of multidimensional signals for hierarchical and interpolation compression methods
Mikhail Gashnikov 14-19

5. Differential method of multidimensional signals compression based on the adapted parameterized interpolation algorithm
Aleksey Maksimov, Mikhail Gashnikov 20-24

6. Efficiency of stochastic gradient Identification of similar shape objects in binary and grayscale images
Radik Magdeev, Aleksander Tashlinsky, Galina Safina 25-28

7. Algorithm for optimizing quantization scales by an arbitrary quality measure
Nikolay Glumov, Mikhail Gashnikov 29-32

8. Hyperspectral data dimensionality reduction using nonlinear autoencoders
Evgeny Myasnikov 33-36

9. Convolutional neural network for detection of pathological changes in MR images of the brain
Yulia Agafonova, Andrey Gaidel, Pavel Zelter, Aleksandr Kapishnikov 37-40

10. Pine crown density determination using local binary patterns
Alexey Pyataev, Anna Pyataeva, Ruslan Brezhnev 41-43

11. Monitoring of the recreation effects on land cover with the use of an unmanned aerial vehicle on the example of the Strelnaya Mountain in Samara Region
Olga Belova, Anna Denisova, Natalya Vlasova, Lyudmila Kavelenova, Evgeny Korchikov, Victor Fedoseev, Tatyana Chap 44-49

12. A method of user preference elicitation by pairwise comparisons
Alexander Borodinov, Vladislav Myasnikov 50-53

13. Assessment of post-fire vegetation state dynamics in Ivan-Arakhley natural Park (Zabaikalsky Krai) using radar Sentinel 1 and optical Sentinel 2 data
Natalia Rodionova, Irina Vakhnina, Tatiana Zhelibo 54-59

14. Detection and age estimation of burned areas of natural grassy communities in the Samara region using Sentinel-2 data
Alina Bavrina, Lyudmila Kavelenova, Oksana Kuzovenko, Natalya Prokhorova 60-65

15. Ways to increase the probability of correct recognition of noisy speech commands by their cross-correlation portraits
Ekaterina Galitskaya, Viktor Krasheninnikov 66-69

16. The use of remote sensing data for estimation of the anthropogenic load on the coastal areas of the Crimea in 2017–2019
Tatiana Shul'ga, Liudmila Verzhevskaia, Alesya Medvedeva 70-73

17. Automatic recognition of the number of channels in unidentified multispectral data
Nina Vinogradova, Andrey Sosnovsky, Natalya Sevastianova 74-77

CEUR-WS.org/Vol-2665/Contents.pdf

18. Analysis of the accuracy of determining the vegetation edges according to the Landsat remote sensing data over the territory of the Sverdlovsk Region
Nina Vinogradova, Andrey Sosnovsky, Stepan Yegorov 78-80

19. Splicing detection based on improved FISH descriptors
Andrey Kuznetsov, Artem Lanin 81-84

20. The effect of image pre-processing on objects adaptive stochastic identification efficiency
Radik Magdeev, Marat Suetin, Aleksander Tashlinsky 85-88

21. Modeling and processing of SAR images
Nikita Andriyanov, Danila Andriyanov 89-92

22. Iterative algorithm of optical triangulation sensors signals superposition for measuring solid deformation
Rinat Diyazitdinov 93-99

23. Global image analysis: detection and recognition of basic informative elements of road scenes
Konstantin Kiy, Roman Dosaev 100-104

24. Image segmentation based on RGBD data
Elena Medvedeva, Elisaveta Varco 105-108

25. Increasing the distinctiveness of forest species composition by satellite images
Sergey Zraenko 109-112

26. Detecting the boundaries of hyperspectral image objects as a special analysis tool
Tamara Utesheva, Konstantin Puhky, Vadim Turlapov 113-117

27. A dataset for determining user preferences of users on personal vehicles
Aleksandr Borodinov, Vladislav Myasnikov, Alexander Yumaganov 118-121

28. A compact acousto-optical module for hyperspectral imaging systems
Milana Sharikova, Vladislav Batshev, Alexey Kozlov, Sergey Boritko, Vitold Pozhar, Anton Karandin 122-125

29. Restoring the height of the terrain taking into account the statistical relationship of the interferometric pair of radar images
Oleg Goryachkin, Ivan Maslov 126-129

30. Information system for segmentation of nanoparticles in STM-images
Stanislav Egorov, Igor Arhipov, Tatyana Shelkovnikova 130-134

31. Scene-based non-uniformity fixed pattern noise correction algorithm for infrared video sequences
Igor Kudinov, Ivan Kholopov 135-140

32. A comparative study of restoration techniques for images defined by chaotically scattered point set
Yuliya Vybornova, Aleksey Maksimov 141-144

33. Deformation field estimate for image sequence by applying stochastic adaptation in the block method
Roman Kovalenko, Pavel Smirnov, Radik Ibragimov, Alexander Tashlinskiy 145-148

34. Landmine detection and minefield mapping with the help of multi-angle long-wave infrared hyperspectral data fused with the 3D terrain reconstruction
Arsenii Golovin, Evgenii Sechak, Anatolii Demin 149-152

35. Research of Lossy image compression algorithm based on fractal discrete cosine transform
Vladislav Butorov, Marina Chicheva 153-156

36. Semi-fragile watermarking for HGI image compression
Alina Bavrina, Victor Fedoseev 157-163

37. GPU implementation of the stochastic on-time arrival routing algorithm
Anton Agafonov, Aleksey Maksimov, Alexander Borodinov 164-167

38. Agricultural parcel localization on satellite images using U-Net-based neural network
Maria Pavlova, Alexey Savchik, Lev Teplyakov, Mikhail Zagarev, Igor Kukoev, Anton Grigoryev 168-171

39. Photo privacy detection based on text classification and face clustering
Lyudmila Kopeykina, Andrey Savchenko 172-176
